

Your skills are our success: Welcome to BUSS!

For over 60 years, BUSS has stood for quality and performance in compounding. As a leading manufacturer of high-quality compounding systems and specialist in co-kneader technology, we successfully support companies from a wide variety of industries around the globe to process their products. Become a part of our success story and shape the future of compounding!

Strengthen our team as ...

Process Engineer FH, ETH or equivalent

Your tasks

The multifaceted task area includes technical and process engineering consulting for our customers. You will be commissioning Buss Kneader lines for customers worldwide, performing process engineering design calculations and layouts, and carrying out customer trials at our in-house technical centre. This involves you with your process engineering knowhow right through the project, from inquiry to customer handover. You continuously develop and optimize our processes, take pleasure in documenting your expertise in a structured manner, and pass this on internally as well as externally through lectures and customer training.

What we expect from you...

We expect from you to have a process engineering or mechanical engineering degree/diploma or comparable qualification, with good experience in process engineering or plastics technology. You are accustomed to independent and goal-oriented working, and characterized by flexibility and reliability under heavy load. You speak fluent English and German. You are willing to travel world-wide (about 40 %).

What we offer you...

We offer you an interesting multifaceted work with a high level of personal responsibility in a small motivated team, attractive employment conditions with up-to-date social benefits and annualized working time with at least five weeks vacation.

Have we sparked your interest?

If so, please e-mail your complete application documents to jobs@busscorp.com. Direct applications are preferred.
